

Northacre Resource Recovery Centre

At the time of installation the system at the Northacre RRC was the largest Local Authority rooftop PV system in the UK. 100% of the energy generated is used on site turning household waste into Solid Recovered Fuel (SRF).

Wiltshire Council, the system owners, will receive more than £1.5 million in bill savings and Feed-in Tariff income over the next 20 years. Crucially, the the unit price of electricity produced by the panels over the system's life is significantly less than the current cost of grid supplied electricity.

System Size:	318.24 kWp
Commissioned:	July 2014
Client:	Wiltshire Council
Modules:	Vikram Solar Eldora Prime 255W
Inverters:	Power One Trio
Roof type:	Double-seam trapezoid roof

Estimated annual output:	280,500 kWh
Annual CO2 emission savings:	148.28 tonnes
